

## **React JS & Redux Task**

### **Trello Board**

#### **Functionalities**

- User should be able to create a board.
- User should be able to view all boards.
- User should be able to create a task under a board.
- Each task can have 3 statuses (Pending, In-progress, Done).
- User should be able to filter tasks based on status.
- In each task, the user should be able to add comments in it.
- In view board, the user should be able to view all tasks in it (and comments count on each task).
- In view task, the user should be able to see all previous comments.

#### **Things you need to keep in mind while this project**

- Use Redux for state management.
- No backend, work with local storage for storing boards data.
- No fancy CSS (use minimal CSS), focus on functionalities.
- Use dummy user, for now, don't worry about login/login and all.
- Code quality should be good.
- Data management and state management should be done well.
