Frontend Developer Assessment Task

Task:

Create a dashboard which has the following -

1. A login page with User ID and Password (Credentials can be static).
2. After Login, a table should be displayed with 5-6 columns. Above the table should be a feature to select "to" and "from" dates, based on which data should be populated.
3. Create a keyword search function on the list.
4. Create My Profile section of the user with basic info (name, mobile number, email etc.)
5. Make edit profile section and a feature to upload profile photo as well.

Additional Tasks (Not Mandatory): You can represent data through charts (highcharts or google charts) and can also design multiple forms to show transitions. You are free to use other components and open source libraries as well.

Assessment:

1. Projects which will be designed on API and database(any) will be given added advantage.
2. Please submit screenshots of all the modules of the project, along with documented self-written code.
3. Also include your updated resume in the final submission.
4. You can take upto 2 days from the day of receiving this task to complete it.
5. Please send your complete and final submissions on sachrajput1989@gmail.com

Note:

1. Data can be taken either static or excel, .csv or can design a db as well.
2. You can only use Angular/React.js to develop this project. Other submissions will be rejected.
3. All designs should be responsive in nature.
4. For any missing information/instructions in this task, please use your best judgement.
